Report Date: March 27 2005

March 27 2005

Mr. Alexander Johnson, President Johnson Mechanical Contractors 3569 Pipefitter Drive Middleton, WI 53562

Dear: Mr. Johnson:

Thank you for contacting us. The following is the information that you requested on Johnson Mechanical Contractors located at 2754 Grand Avenue, Madison, WI 53562. Enclosed you will find our complete Operations Analysis for this business. This letter contains a general overview of the findings of our analysis. For more complete data, please review the enclosed information.

Our analysis of the company's last year's financial performance can be seen in the results that were obtained in a review of the company's income statement and balance sheet that has yielded the following key financial ratio performance: Acid Test Ratio: 2.06, Current Ratio: 2.64, Asset Liquidity Ratio: 0.85, Debt Equity Ratio: 0.64, Return on Investment: 22.91, Working Capital Turnover Ratio: 4.53, Inventory Turnover Ratio: 4.75, Average Age A/R: 77.42, Average Age A/P: 56.39, Cash Conversion Period: 158.11, Cash Turns: 2.31, Cash Demand Period: 115.49, Profit Margin Before Tax: 5.05, Return on Assets: 20.16.

As part of our financial analysis, we estimated the potential of the company's next year's financial performance by creating a financial model. To begin this model, we started with a budget, which is a short term financial plan that uses the company's last year's financial performance as the base standard and adjusts the base using assumptions that either increase or decrease the sales and/or price and/or expense line-items. The final result of this analysis is totally dependent upon the assumptions made herein. Since this is a financial analysis that is dependent upon the listed assumptions, it must be understood that different financial variable assumptions would yield different results. Using the assumptions that are shown on each of the expense line-items contained on the attached proforma budget, and assuming the sales will change by 3% and assuming the price will change by 1.5%, next year's budgeted profit would be 6.38%, \$614,401.

As part of next year's short term financial plan, we have included a job costing analysis that would accurately determine, when multiplied to the estimated cost of labor and/or materials of the company's product(s), both the job cost multipliers for job or product's cost and the job cost multipliers that would create the base selling price standard needed to achieve the company's

budget goal. To achieve the results of the attached budget goals, the multiplier that would be used for the labor calculation is 2.4418 and the multiplier that would be used for the materials calculation is 1.5948. To determine the cost of any job or product, the multiplier that would be used for the labor calculation (if appropriate) would be 2.2984 and the multiplier that would be used for the materials (if appropriate) would be 1.5011. If your product(s) use both labor and materials, you would use the sum of the labor cost of your product times the labor multiplier and the material cost of your product times the materials multiplier. If your product contains either labor or materials, you would use the appropriate multiplier.

To conclude our analysis, we determined the cash demands of the company that would be needed to achieve the next year's budget profit goals. As part of the analysis, we considered the historical number of days-out that was being experienced in the collection of receipts and the payment of the company's obligations. An analysis of the effects on profit and/or cash demand that other collection or payment periods would have on the cash flow are also available as a separate analysis. Based upon the attached anticipated cash flow schedule, it was determined that the following cash or credit line of \$269,091 would be needed to fund next year's budget goal. Based upon an anticipated credit line having a rate of 7.5%, \$10,983 would be paid in interest expense to fund the credit line. After adjusting the original budgeted profit of \$614,400 for the additional expense of the credit line and any additional profit generated from discounting, the new anticipated Net Profit Before Taxes would be 6.73%, \$648,564.

This is an accurate mathematical analysis that is dependent upon the assumptions made herein. Since the analysis is dependent upon the listed assumptions, remember that different financial variable assumptions would yield different results. I would be glad to work with you in creating any additional business models that are based upon different sales, price and expense assumptions that you would like to consider.

This is a sample insert for the evaluator cover letter to show the location of the insert in this sample business analysis/valuation report.

Sincerely,

Robert Smith CPA President

MEASURING THE "FISCAL-FITNESS" OF A COMPANY: THE ALTMAN Z-SCORE

Year Being Viewed:

In the early 60's Edward Altman, using Multiple Discriminate Analysis (MDA), combined a set of 5 financial ratios to come up with the Altman Z-Score. This score uses statistical techniques to predict a company's probability of failure using the following 8 variables from a company's financial statements:

From the Income Statement:

1 2	EBIT (Earnings Before Interest & Taxes) Net Sales	\$465,728 \$9,216,687
Fre	om the Balance Sheet:	
3	Total Assets	\$3,324,009
4	Market Value of Equity	\$2,032,669
5	Total Liabilities	\$1,291,340
6	Current Assets	\$2,821,702
7	Current Liabilities	\$1,067,394
8	Retained Earnings	\$1,643,248

The 5 financial ratios in the Altman Z-Score and their respective weight factors are as follows:

RATIO	Weightage	Range
A EBIT / Total Assets	3.300	-4 to +8
B Net Sales / Total Assets	0.999	-4 to +8
C Market Value of Equity / Total Liabilities	0.600	-4 to +8
D Working Capital / Total Assets	1.200	-4 to +8
E Retained Earnings / Total Assets	1.400	-4 to +8

These ratios are multiplied by the weightage as above, and the results are added together.

Z-Score = $A \times 3.300 + B \times 0.999 + C \times 0.600 + D \times 1.200 + E \times 1.400$

If the Z-Score is:

Above 3.0	The company is safe based on these financial figures only.
Between 2.7 and 2.99	On alert. This zone is an area where one should exercise caution.
Between 1.8 and 2.7	Good chances of the company going bankrupt within 2 years of
	operations from the date of financial figures given.
Below 1.8	Probability of financial embarrassment is VERY high.

Z-Score 5.42
